

## High North Cold Technology Workshop 2012

14th June 2012

DNV, Oslo, Norway

High North Technology Center of Narvik University College (NUC) in collaboration with Det Norske Veritas (DNV) invites you all to attend and participate in cold climate technology workshop on 14<sup>th</sup> June 2012 at DNV Oslo, Norway. This one day event will focus on various technical issues related to cold climate in high north particularly atmospheric icing, snow drifting and winterization. The event will be organized as part of COLDTECH project on which NUC and DNV are working together.

This scientific event, associated with The International Society of Multiphysics, will focus on two main research themes:

1. Atmospheric icing & sensors
2. Weather protection design and performance

This event will give you an opportunity to know more about the technological advancements in cold climate research and also to have discussion with the researchers, working on cold climate technology.

There is no fee to attend this event, so make a note in your diary to attend High North Cold Technology Workshop in Oslo on 14th June 2012.

The registration deadline for this event is 15 May 2012.

To register please contact Dr. Muhammad S. Virk: [msv@hin.no](mailto:msv@hin.no)
